Install Repair or Close Underground
Storage Tanks

Install Repair or Close Underground Storage Tanks

A contractor applying for the classification of Install Repair or Close Underground Storage Tanks, in lieu of a trade examination, must provide a copy of the card or certificate for Underground Storage Tank Certified Worker from the Louisiana Department of Environmental Quality (DEQ).

Further Information may be found regarding this certification at:

<http://www.deq.louisiana.gov/portal/>

The DEQ card or certificate must accompany the request for this classification, along with any applicable fees.

Each time the license is renewed, a copy of a current DEQ card or certificate must be sent with the application for renewal before the renewal can be processed.

Contractors who want to clean up soils contaminated with hazardous or toxic waste around storage tanks must hold the classification of 7-220 Hazardous Waste Treatment or Removal BEFORE remediating the soil.

Information about Hazardous Waste Treatment or Removal may be found at:

http://www.lacontractor.org/pdf/study-guides/hazardous_Waste.pdf
